Problem Gambling, Teens and College-Age Students

The prevalence rate for problem gambling is higher for teenagers and college-age students than it is for adults.

Gambling, Teens and College-Age Students

- Monthly use of online gambling shifted between 2008 and 2010 for teens and college-age students. College-age males who used internet gambling increased from 4.4 percent to 16 percent; high school-age males went from 2.7 percent to 6.2 percent; and high school-age females went from 9.5 percent to 22 percent (Romer, 2010).
- Twenty percent of college-age students play online poker at least once a month (Romer, 2010).
- College-age students games of choice are: games for money; scratch-offs and lottery games; games of skill such as bowling or basketball; and poker and sports pools with friends or co-workers (Valentine, 2007).
- Student athletes and sports fans gamble more than other students (Gambling on College Campuses, n.d.).

Gambling Addiction, Teens and College-Age Students

- Six percent of college-age students have a gambling problem (College Gambling Facts and Statistics, 2018).
- Students with gambling problems are more likely to use tobacco, drink heavily, use illegal drugs, drive under the influence and have a low grade point average (College Gambling Facts and Statistics, 2018).
- Teens make up half the 16 million people in the U.S. with gambling addictions (Internet Gambling Among Teens and College Students, 2018).
- When youth begin gambling at an early age, their perception of gambling is altered into believing they have a higher than 50 percent chance of winning (Internet Gambling Among Teens and College Students, 2018).
- Parents who gamble and encourage children to gamble are also key factors in children developing a gambling addiction (Internet Gambling Among Teens and College Students, 2018).
- African-Americans and other minority groups have problem and pathological gambling rates of two to three times higher than Caucasian gamblers (Cunningham-Williams, 2007).
- Military personnel are predominantly, young, male and heavily represented by ethnic minorities - all commonly associated with problem gambling (Timothy A. Steenbergh, 2008).

Problem Gambling Signs and Barriers to Treatment

- Many students exhibiting gambling problems will: show declining grades; withdraw from friends, family and social activities; engage in illegal activity; steal, lie and sell personal belongings; have a large amount of debt and possess a large amount of cash; have strangers calling more frequently; appear distracted and moody; have unexplained absences from work or school; break curfew; or spend hours online (Le, Liao, Lee, & Woo).
- Only 22 percent of U.S. colleges and universities have policies on gambling (College Gambling Facts and Statistics, 2018).
- There is little to no awareness of problem gambling as an addiction, treatment services or as a possible harmful activity for youth. (Youth Gambling Addiction, 2018)
- Global online gambling is now worth an estimated $30 billion (Internet Gambling Among Teens and College Students, 2018). It is vital for parents and mentors to talk to teenagers and college-age students about online gambling (Youth Gambling Addiction, 2018).
